## WHAT IS MATHAZONE?

Mathazone is an early years mathematics programme especially designed for teachers to deliver the mathematics curriculum in an engaging and systematic way while supporting children's social and emotional development.

Through special stories and cute characters Mathazone helps early learners discover maths in real life and speak mathematical language fluently.

Abstract mathematical concepts turn into meaningful concrete values with the help of stories and games in the Mathazone Forest.

The programme guides teachers through weekly plans to show how an ordinary daily problem can be converted into a mathematical concept key teaching point.

Mathematical achievement becomes easier for teachers with Mathazone because the links between the stories and maths concepts are mostly based on very basic daily life needs and emotions. All of them can be understood and implemented easily in a way that children understand and enjoy.

Coding the universal maths concepts in the early years has never been so easy.

Teachers can achieve this simply by following the Mathazone Programme weekly plans on the **online portal**.

Each new maths concept in Mathazone Forest creates a stepping stone for children to understand future maths concepts as well as consolidate the concepts they have learned previously. All mathematical concepts are introduced in the right order of universal mathematics through the weekly implementation plans.

All these concepts are combined with social and emotional analysis in the plans.

Mathazone stories create a place where children can easily discover the patterns in mathematical concepts. The feeling of discovery and success they achieve as they progress through the programme supports their confidence and encourages a higher interest in maths as they grow.

Teachers deliver all the concepts to the children by using;

- » Mathazone stories and drama
- » Images of the Mathazone Forest characters and maps
- » Mathazone game techniques
- » Online Mathazone weekly plan materials such as videos and songs

**Mathazone weekly plans are prepared with a holistic approach so that teachers can reach all children through 6 different cross-curricular areas:**

- **Maths in Music**
- **Maths in Art**
- **Maths in Games**
- **Maths in Science**
- **Maths in Language**
- **Maths in Emotions (Life Coaching)**

The Mathazone Forest programme provides a happy learning path to teachers and schools to help children discover mathematical concepts and relate them to real life.
